Government

IPL's revenues from providing consultancy services to Government have been in excess of £1 million for each of the last five years. We have a number of framework agreements covering a broad range of IT related consultancy services, and we develop quality IT solutions.
We have partnered leading Defence contractors on many high profile projects and have taken the lead in the design and implementation of several large and complex developments, including safety critical systems.

Hewlett-Packard
ICL
MOD (PE)
Racal Electronics
Racal Thorn
Rolls Royce
Smiths Industries
VSEL

CONSULTANCY SERVICES

IPL's consultancy services encompass the entire systems lifecycle and are backed up by experience of relevant working practices, methods and standards. Individual staff hold relevant academic and professional qualifications including ITIL, PRINCE II and SSADM accreditation. Our consultants are also familiar with business analysis methodologies such as soft systems analysis, and have developed procedures to implement practical IT strategies based upon the outputs from such methods.

We have an number of framework agreements in place for our consultancy services with public sector organisations including the Department of Transport Local Government and the Regions (DTLR), Highways Agency, Office of Passenger Rail Franchising, Office of the Rail Regulator, and the Welsh Development Agency.

IPL's quality IT solutions for the public sector encompass a wide range of technologies to meet a variety of needs. We have undertaken multi-million pound developments in the Defence sector, and have developed a 600 user crime and criminal intelligence system for Kent County Constabulary, under contract to Securicor Information Systems. We are equally adept at delivering cost effective stand-alone or networked systems based on PC based products such as Microsoft Excel and Access.

We have developed a number of Microsoft Access systems for the Office of the Rail Regulator, including an Inland Revenue and VAT Returns management system, a Personnel Database and a system to assist in the administration of Rail Users Consultative Committees.

DEFENCE

Since the early 1980's IPL has been providing consultancy and development services across a wide range of Air Defence, Electronic Warfare, Communications and Flight Critical projects. Our management and software standards have been instrumental in providing quality systems to some of the largest defence contractors in the world.

Our Air Defence experience includes the design and development of software for the UK Airborne Early Warning Data Link Buffer, the UKAIR Command and Control Information System and the Reconnaissance Tornado Ground Exploitation Equipment System. We have wide experience in the development of civil and military communications systems including a Maritime Command and Control Information System (OPCON) and the Network Management Subsystem for the RAF's UNITER network. Our development of software to support in-flight refuelling systems has led to our Quality Management System being successfully audited as complying with the requirements of level 1 (flight critical) software as defined by the United States Radio Technical Commission for Aeronautics (RTCA-DO-178B).
